

RightAngle™ Products' Commitment to the Environment

As we strive to produce the highest quality and affordable products for our customers, we are committed to using the most environmentally responsible manufacturing practices currently available.

Purchasing:

- Purchase recycled steel which contains 50% or more.
- Purchase recycled corrugated.
- Our work surfaces are LEED and CARB Certified.
- To reduce the amount of emissions due to shipping, we use vendors who are local or geographically close.

Production:

- Our company has invested in Wisconsin's Focus on Energy Program (Clean Corporate Citizen Program) by replacing all existing lighting throughout the entire plant with low energy lighting, which is further enhanced by motion sensors.
- Our plant creates no bio hazardous waste, nor emits toxic substances in any form.
- The powder coating used on all steel products is solvent free and during the application process, the air, which is released, is actually cleaner than it was before the process began.
- No VOC concerns with any product.
- We sell previously used items or items which may be categorized as 2nds due to minor flaws. Therefore, these products may be used/reused and are not sent to landfills.
- We recycle all scrap steel created during production.
- We recycle all corrugated deemed unusable or un-reusable.

Recycling practices within the office:

- Reusing copier and fax paper to ensure that both sides are used before the paper is sent to be recycled off-site.
- Recycle cardboard, paper, aluminum and plastic products in all departments.
- We eliminate paper usage whenever possible by utilizing electronic means of communication. Examples are emailed invoicing / acknowledgements / letters, memos and notices to reps/dealers and Online AR/AP banking.
